Subject: Cement-Lock Introduction: Portland Harbor Community Advisory Group

Dear Kira:

We had been contacted by Jackie Calder of the Portland Harbor Community Action Group, because for years they had read about the Cement-Lock technology and they felt it was a more desirable solution to permanently destroy the toxicity of environmental contaminants in their communities rather than storing the contaminants in Confined Disposal Facilities.

This week, Jackie shared with me that she was preparing presentations for the upcoming community forums. I followed-up with a brief description of the design upgrades that have been made to the Cement-Lock process and the endorsements we have received for the use of the technology. Along with the attached PowerPoint introduction is supporting endorsements for the technology from:

- EPA, Passaic River Option Plan: Page 15, Disposal Option "C"
- NACEPT Report: Pages 34 and 35
- Passaic River Coalition Report: Pages 24-28, 33-39

We have developed a working relationship with the global EPC company, Amec Foster Wheeler. They have become an integral part of managing the engineering & design of the Cement-Lock process and will be continually upgrading the Cement-Lock technology to meet and exceed the latest in governmental regulatory requirements. As a courtesy, we wanted to let you know of the communication that has taken place and we remain available to answer any questions and assist you however you feel that is possible.

Regards,

Bill Cutler
